

It's Ryan "The Orchid Guy" here :-)

I know yesterday's newsletter was a bit long and some people didn't get a chance to read it all the way through.

So I'll give you a chance to catch up by keeping today's newsletter short and sweet :-)

Today, I've got a quick "home remedy" reblooming tip for you.

After your orchid has finished reblooming and you cut back the stem, here's an excellent trick for preventing infection:

Using the hot wax from a candle, you can actually "seal" the freshly cut tip of your orchid's stem, which is an excellent way to prevent infection!

Here's what to do:

Once you've cut back your stem using your sterilized tools, simply light a candle and allow it to accumulate a little melted wax around the wick.

Blow out the candle. And before the wax has a chance to harden again, touch the wet wax to the exposed tip of your freshly cut stem.

Voila! In less than 2 minutes, you've created a home-made protective coating for the exposed tip of your orchid's stem. And this little trick will help keep your orchid disease free for months!

To learn HUNDREDS of MORE tips like this today, click on the link below now:
